

Lacq Green Valley, a renewable energy demonstrator

Lacq Green Valley will be installed in Lacq to promote the energetic transition in the Nouvelle Aquitaine Region. Different actors as CANOE, CHEMPARC, ARKEMA, M2I, NOBATEK, BERTIN, UPPA ... will develop industrial, research, training on a common platform dedicated to the production, storage and management of renewable energies and focused on different applications (industry, agriculture, construction...).

Based on collaborative research and development projects, this experimental platform will be opened to industrial partners. Benefits from the equipments of the platform and training will be proposed to school children as well as students and professionals.

The platform will be an open area, to show to the wider public the different trades (from industries to applications), competencies and applications of renewable energies.
