

Pilot programs

Energy transition A reality in southwest France

In the geographical space of the E2S institutions, a significant number of initiatives and pilot programs dedicated to renewable energies are already in place.

Based on historical industrial activities and areas of expertise, most of them are developed in collaboration with research teams of UPPA.

- * Lacq Green Valley
- * Deep Geothermy
- * Integrated Electro-Mobility
- * Subsurface CO2 storage
- * ITE for sustainable construction
- * Biomethane injection
- * E-Fan: electrical-powered aviation
- * Vic Montaner: Organic photovoltaic
