

Research dissemination

One of the major assets of E2S UPPA is its strong relationship with national and international companies, which is part of the dynamic of innovation leading to new industrial specializations (e.g. innovative batteries or the fully electric plane).

This allows the dissemination of research results thanks to the collaboration between the businesses implemented on the territory and the university's research units.

That collaboration may take the form of

- * technology transfer
- * pilot programmes focused on energy transition
- * partnership-based research project
- * ...
