

# SNEE - Support for business creation

*After obtaining the national status of students businessowners, students benefit from specific support on their project. They are followed during all the stages of business creation and helped on the different issues they may encounter.*

## Individuality and collectivity combined for a better support:

This support is provided individually. Students regularly meet with the team who is here to follow their progress and guide them through the methodology of project management. Each appointment is subject to **personalized support** adapted to the needs of the student.

A **collective dimension** is also favoured. Indeed, exchanges between student entrepreneurs and actors from the socio-economic world are encouraged.

For instance, an afterwork led by a professional is organised each month; that is an opportunity for the students to meet the different structures of the local ecosystem and to share experience as well. In addition, workshops on specific themes are set up to enable student entrepreneurs to acquire new skills necessary to launch their activity.

Finally, an unlimited access to the **EntrePau** student incubator in Hélioparc (Pau) and **Arkinova** (Anglet) allows them to work in a professional and stimulating environment, while being surrounded by other students carrying out their projects.
